Introduction

This is a reference manual to describe the interface provided for the Pray Time plugin for the QSC Q-Sys system.

Overview

The is designed to calculate prayer times for your city based on calculation parameters and settings set in the plugin, the plugin calculate pray times and trigger any notification set in the overall system design, which can be muting the audio system, playing Athan audio files, etc.

The Plugin is calculating pray times locally on the processor without any connection to the internet, that's why the plugin needs some parameters to be set properly in order for the plugin to get the correct pray times in the target city/location, the following parameters are required for the target city/location:

- Location Coordinates (Latitude & Longitude) of the city
- Calculation method used in city
- Juristic (Asr) method used in city
- High Latitude method used in city
- Time format to be used to show times on layout/UCI
- Minutes adjustment for each pray to match the local pray times

If these are not provided properly the plugin will not calculate pray times properly, all these parameters should be set for the target city after loading the program to the Core processor

To get the correct parameters that are suitable for your city, please visit
<https://ultcontrol.com/modules/pray-times/>

It is important to set the processor date, time, and time zone to the correct local data before loading the program to the processor, if these are not set correctly, the calculated times and times notification will not be done properly.

Because pray times changes daily, the plugin is already programmed to re-calculate the pray times at midnight to get the new day times

This plugin is Core processor licensed, meaning that the plugin will not work in full if it is not licensed to the target Core processor, in this case the plugin will indicate that on the status indication on the layout, and it will show only the first 3 times if it is not licensed properly, but in case of emulation, the plugin will show and notify for all times for only 1 day. In order to license it you will need a License key and Activation key which can be acquired by visiting
<https://ultcontrol.com/modules/pray-times/>

Location Details:

Location Details		
Latitude	Longitude	Time Zone
25.263300	55.308700	4.00

Latitude: Sets the latitude value of the target location to calculate pray times for.

Longitude: Sets the longitude value of the target location to calculate pray times for.

Time Zone: Displays the time zone as set on the Core processor, this is a read only parameter, make sure to set the Core processor to the correct time zone for the plugin to work properly.

Calculation Settings:

Calculation Settings

Calculation Method: University of Islamic Sciences, Karachi

Asr Method: Shafii (standard)

High Lat. Method: No adjustment

Time Format: 12-Hour

Recalculate Times

Dhuhr Minutes: 0

Custom Calculation Settings

Fajr: Angle 0

Maghrib: Minutes 0

Isha: Angles 0

Calculation Method: Sets the calculation method to be used to calculate pray times for the target city, supported methods are:

- Custom Settings
- Shia Ithna Ashari (Jafari)
- University of Islamic Sciences, Karachi
- Islamic Society of North America (ISNA)
- Muslim World League (MWL)
- Umm al-Qura, Makkah
- Egyptian General Authority of Survey
- Egyptian General Authority of Survey (bis)
- Institute of Geophysics, University of Tehran
- Fixed Isha Angel Interval
- UAE General Authority of Islamic Affairs and Endowments
- Kuwait
- Qatar
- Algerian Minister of Religious Affairs and Wakfs
- Tunisian Ministry of Religious Affairs
- Diyanet İşleri Başkanlığı, Turkey
- JAKIM (Jabatan Lemajuan Islam Malaysia)
- MUIS (Majlis Ugama Islam Singapura)
- SIHAT/KEMENAG (Kementerian Agama RI)
- UOIF (Union Organization Islamic de France)
- France - Angel 15
- France - Angel 18
- Spiritual Administration of Muslims of Russia

Dhuhr Minutes: Sets the number of minutes to be added to noon time for Dhuhr pray time, supported values are 0 to 100 minutes.

Asr Method: Sets the Asr method to be used to calculate pray times for the target city, supported methods are:

- Shafii (standard)
- Hanafi

High Latitude Method: Sets the Hight Latitude Adjustment method be used to calculate pray times for the target city, supported methods are:

- No adjustment
- Middle of Night
- 1/7th of Night
- Angle/60th of Night

Time Format: Sets the preferred time format to be used when showing all times in the plugin, including system time, pre-pray times and pray times, supported formats are:

- 24-Hour
- 12-Hour
- 12-Hour No Suffix

Custom Fajr Angle: Sets the value of Fajr angle to be used to calculate Fajr pray time, this field is active only if the **Calculation Method** is set to Custom Settings, supported values are 0 to 100 degrees.

Custom Maghrib Unit: Sets the unit of Maghrib calculation parameter, supported unites are Angles or Minutes.

Custom Maghrib Value: Sets the value of Maghrib angle/minute to be used to calculate Maghrib pray time, this field is active only if the **Calculation Method** is set to Custom Settings, supported values are 0 to 100 degrees/minutes.

Custom Isha Unit: Sets the unit of Isha calculation parameter, supported unites are Angles or Minutes.

Custom Isha Value: Sets the value of Isha angle/minute to be used to calculate Isha pray time, this field is active only if the **Calculation Method** is set to Custom Settings, supported values are 0 to 100 degrees/minutes.

Time Adjustment:

Time Adjustment (Seconds)					
	Fajr	Dhuhr	Asr	Maghrib	Isha
Time Shift (Sec.)	-64	164	45	203	50
	Sunrise		Sunset		
	-215		203		

Time Shift: Sets the number of seconds to add or subtract from the calculated times to make the times as close as possible to the official pray times of the target city, supported values are -600 to 600 seconds.

To get the calculation parameters and time adjustment settings of your city, please visit <https://ultcontrol.com/modules/pray-times/>
